Subject: Inhalation Exposure Quality Table
Attachments: FA Exposure Quality-latest.docx

The Inhalation Workgroup (IWG) has reviewed the formaldehyde exposure quality table in depth (attached). The IWG discussed the 7 major inhalation exposure factors and their relative importance in the ranking of exposure quality. The IWG suggested several changes that improve the table.

Ex. 5 Deliberative Process (DP)

Ex. 5 Deliberative Process (DP)

In addition to refining the exposure quality table, the IWG drafted 3 pages of text that describes the exposure evaluation process. This should assure a level of evaluation consistency between chemicals and between IWG reviewers. Having used formaldehyde as a test case, the IWG members are now ready and able to evaluate exposure quality for other chemicals.

Please let me know if you have any questions about the table.

John
